Precision Machining

Scott Kaser

A vocational class allows you to experience something you might be interested in at no cost and it provides you skills that an employer will pay for and not just this avenue of employment but many avenues of employment.

Student

In this course involves lay and millwork primarily for the first year you do step by step projects that help you learn.

Scott Kaser

The most beneficial part is it allows the student to explore something they would be interested in without a cost to them. This is a career that is available to just about anybody in the area and it's a highly paid trade.

Student

My favorite part of Career and Technical education is that it is a fun course that gets you out of the classroom and you learn real life skills that can benefit you after high school.

Scott Kaser

We have to work that's just a part of our American society but why not take a course that can teach you skills that you'll be paid highly for. It's something that is virtually free to students and you can go right into the working field right out of high school. if you're intrigued with producing stuff this class is for you.
